

**NOTES:**

1. DRAIN AND VENT TILE RECOMMENDATIONS:

(A) WHEN COOLERS OR FREEZERS ARE LOCATED IN HIGH WATER TABLE AREAS THE TILES WILL PROVIDE DRAINAGE OF EXCESS WATER AND SERVE AS AIR VENTS TO KEEP AREA UNDER SLAB DRY.

(B) GENERALLY WHEN FREEZERS OR COOLERS ARE OVER 225 SQ. FT. IN FLOOR AREA AND THE AMBIENT TEMPERATURE IS HIGHER THAN THE GROUND TEMPERATURE THESE DRAIN AND VENT TILES PROVIDE PASSAGES FOR THE FLOW OF THIS WARM AIR. THIS ALLOWS HEAT TO BE STORED IN THE GROUND TO PREVENT ICE BUILD-UP THAT COULD EVENTUALLY CAUSE UPHEAVAL OF THE FLOOR.

2. IF TIEDOWNS ARE REQUIRED SEE DRAWING #AE190 FOR ADDITIONAL INFORMATION.
